

P B P SERVICES

Protective Coating Systems est. 1968

ic Institute of Corrosion
Qualified Paint Inspector
Qualified Fireproofing Inspector

WORLD CLASS MATERIALS USED

At PBP Services to ensure a high quality finish, we only use the best materials for the job.

HISTORY

PBP Services was founded in 1968 by the late Peter Bruce (Patsy) who served almost 20 years in the merchant shipping services, where he took particular interest in ships painting. He moved ashore to start up in business initially painting the fishing boats around the North East Coast.

Over the years the Business has continued to grow in the Marine, Industrial and Commercial Coatings Industry with contracts awarded throughout Scotland and England by Supermarket chains, Hospitals and Factories.

The business is now driven on by Peter Bruce Jr who joined the family run company in 1984. With training an ongoing process, more recently Peter Bruce passed exams at the Institute of Corrosion, qualifying as a registered paint inspector and fireproofing inspector.

OTHER PBP SERVICES

PBP Services offer a range of other services in all types of marine painting. We also offer facilities and services catering for the Oil and Gas sector. To receive further literature detailing such services, please contact us on the details below.

- Commercial & Industrial Painting & Decorating
- Fire Retardant Coating Applications
- Fire proofing Inspection
- Taping & Plastering. Paint Spraying
- Specialised Coating Finishes
- Chemical Resistant Floor Sealers & Applications
- Spray / Injection Foam Insulation
- Steam / Pressure Washing

COMMERCIAL & INDUSTRIAL DECORATING PROTECTIVE COATING SYSTEMS

TESCO STORE, KINGSWAY, DUNDEE

Pic 1-3: The new supermarker on the Kingsway, Dundee is the largest store to be built in Scotland. It was completely painted and decorated from the top of the entrance sign and archway externally, to all taping, filling, decorative finishes and internal steelwork. We had a team of up to 18 people working night and day shifts. Over the years we have been very proud of our involvement with Tesco and Barr Construction. Various contracts have been successfully completed Nationwide, with our dedicated teams working closely with project managers to ensure the highest standards of finishes. We are quite often called on at short notice to supply labour to help with the completion of finishings on large contracts.

ARI CHILDRENS HOSPITAL (ANTI-BACTERIAL COATING SYSTEMS)

Specialised Wallglaze Coatings applied to Operating Theatres and Dental Surgeries at the new Sick Children's Hospital, Aberdeen Royal Infirmary. These coatings are anti-bacterial. Any bacteria are instantly killed once in contact with this finish.

Multi-bed, High Dependency Unit, coated with 2 Pack Wallflex. The benefits are a Self Sterilizing, non toxic performance which remains constant throughout the lifetime of the system.

Skilled personnel who take pride in the quality of their work are always used in order to achieve superior finishes. The specialist coatings can be applied by either roller or airless spray. They are hard wearing, easily cleaned and maintenance free, a surface which will last for years.

KINNLOCH HOUSE HUNTING ESTATE

MAMBOS NIGHT CLUB

Kinnloch house required total redecoration internally requiring specialised skills for the finishes. These included rag rolling, stippling, scumble graining and paper hanging. All external surfaces were cleaned and treated with weatherproof applications providing extra protection against the estates coastal location.

All external walls of Kinnloch were anti-fungicidally cleaned and stabilised. Windows, facias, doors and paths were masked and covered before airless spray application which ensures a more even coat, quality finish, enhanced weather proofing and ultimately a guaranteed longer lifespan.

Peterhead's premier night club was re-decorated to the highest of standards. The job was articulately planned to ensure no disruption and completed within 24 hours leaving the management delighted.

FIRE RETARDANT COATINGS & INSPECTION SERVICES

Application of fire retardant coatings are commonly used in the construction industry for the protection of structural steel against fire. It is essential that these coatings are applied by experienced operators to achieve recommended paint film thicknesses. The applications can either be done on-site during construction or at our in-house facility prior to construction.

Supervision and inspection for certification purposes is carried out by our qualified paint inspector who passed exams on completion of a two week course at the Institute of Corrosion in Sheffield. This enhances the service on offer to our customers.

PLASTERING & TAPEING

PAINTING & DECORATING

A comprehensive service can be offered with taping, filling and plastering carried out by skilled personnel. One contract carried out included 3500m² of taping and filling of plasterboard at Tesco Dundee.

Pic 2: Corridors coated with durable finish at Aberdeen Royal Infirmary. Only the highest quality materials are used to enhance appearance and prolong the life of coatings. Large teams of decorators and labourers can be arranged to carry out large contracts professionally and efficiently.

Pic 3: Painting and decorating of Peterhead Football Club's executive lounge and bars created a warm and welcoming setting.

STEAM / PRESSURE WASHING

INSULATION FOAM SPRAYING

UHP water blasting is often the preferred choice where dry blast cleaning is not practical. The main advantage is that the process is a lot cleaner without the clearing and disposal of grits that are required for dry blast cleaning. Ultra high pressure water blasting with a pressure of up to 30,000 p.s.i., can also clean surfaces back to the bare elements.

Polyurethane spray-on insulation foam can be applied externally or internally. It can be applied to roof spaces or buildings ultimately extending the life-span of roofing materials or cladding. This system is versatile and can be applied at unlimited thickness, giving a Class 1 fire protection rating and excellent insulation properties unrivalled by any other materials on the market.
